

ABSTRACT

A storage container for compact disk protective covers, is a storage structure for facilitating packaging and arrangement of compact disk protective covers, and thus providing users with easy access to compact disk protective covers contained therein. The storage container formed by folding an integral and spread board, and is able to accommodate compact disk protective covers at an interior thereof. The storage container is provided with an arched aperture at an edge of a top portion thereof, and a long opening at a front side thereof for corresponding with the arched aperture. Through a corresponding design of the arched aperture and the long opening, users are facilitated to with easy access. In addition, compact disk protective covers are stored and package intact using an accommodating chamber formed for overcoming drawbacks of prior plastic coating packaging for compact disk protective covers.
